Flexible Deployment Options

Coherent is comprised of several specialized modules that can be used individually or combined for a customized automated Facilities Management Solution.

Coherent enables you to select deployment options that best fit your unique business environment. Coherent can be deployed using several options:

- **Windows Desktop**: Coherent runs on any MS Windows based computer. All desktop tools support LAN/WAN based multiple users.

- **Web Browser**: WebTrak is a flexible, web based solution that provides work order processing, resource scheduling, equipment preventative maintenance, and asset tracking services through a standard web browser interface. WebTrak can be installed on your server or hosted at our secure facility (**SAAS**).

- **Both Desktop & Web**: WebTrak can be used side by side with Coherent Desktop solutions to provide a powerful, comprehensive solution for organizations of all sizes. In many cases, end users/tenants use WebTrak to submit work order requests via the web. Technicians and vendors also use WebTrak to view work assigned to them and review future assignments using the WebTrak calendar features
